NEWSLETTER

The following list of errors were reported by customers or found by CSI after the data was first released. They may or may not affect a user depending upon the time the users data was accessed. Some of the errors represent corrections to past data that may only affect expired contracts, and some of the errors may be reported here a second time. The emphasized values, (those in darker print) represent the corrected values.

The base contract causing the error is underlined. Most errors were contributed by the exchange's failure to report timely settlement prices. In this event CSI released the last price traded for the day.

ERROR REPORT FOR MARCH 1983

*The volume and open interest are used in their raw form. The scientific notation requirement of Quicktrieve would require a raw value of 217040, for example, to be stored as 121704. For a volume or open interest of magnitude 99999 or less requires no adjustment.

Quicktrieve Developments

The new manual for version 2.2 will be mailed after Easter. It is more comprehensive than the last and covers far more detail regarding the TECH-ANALYSIS program in the Quickstudy Subsystem. Quickstudy now gives the user the means to optimize the TECH-ANALYSIS window size parameter, and more help in writing your own analysis programs.

We have had very few complaints on the version 2.2 release. It appears to be a very stable product.

The sign-on logic for International Users has been improved, and multiple Dialog files are now possible.

Many users have asked us how we managed to get the Quickplot module to run so fast. Most users have found it surprising that it can retrieve, in only one second, any five month period of a nine year ASCII Text file. We are proud of it's performance, and we hope you will enjoy its flexibility to superimpose moving averages, and help to provide you with general market visibility.

Two of CSI's customers have asked us to reference their work this month:

Barbara Diamond is holding a "Computer Power Seminar" on May 14 at the O'Hare Hilton in Chicago. It is sponsored by Universal Futures Trading, and will cover off-floor trading and overnight swing strategies with some pointers on how to find major market turning points using the latest computer tools. Please contact:

Barbara Diamond
Universal Futures Trading
28 W. Chicago Ave.
Hinsdale Ill. 60125
(312)- 655-2260

Bill Cruz of Omega Research has a system which will operate with CSI data, gathered by Quicktrieve. We haven't seen it operate, nor do we endorse it; however the enclosed card can be used to obtain information, if you are interested.

RELEASE OF STOCK DATA BASE

Beginning sometime in April, CSI will be offering data on all the optionable stocks that are traded on the CBOE and the American exchange. Such data will be ready for access each evening at around 5:00 P.M. EST. We will send more details on this next month.
